***CMS Announces CLFS for 2017 –  
AlloMap reimbursement decision reversed; rate to remain at \$2,821***

BRISBANE, Calif., November 16, 2016 – CareDx, Inc. (Nasdaq: CDNA), a molecular diagnostics company focused on the discovery, development and commercialization of clinically differentiated, high-value diagnostic solutions for transplant patients, announced today that the Centers for Medicare & Medicaid Services (CMS) issued final changes to the CY 2017 Medicare Clinical Laboratory Fee Schedule (CLFS). These fee changes included AlloMap, which went from a proposed rate of \$1,920 back to the current reimbursement of \$2,821. CMS mentioned that changes were based on public input on the preliminary determinations and final 2016 gapfill files issued on September 30.

“We applaud CMS’s decision to step in and reverse the proposed reduction in reimbursement for AlloMap”, stated Peter Maag, President and CEO of CareDx. “This decision ensures that heart transplant patients and physicians will continue to benefit from the only non-invasive surveillance solution on the market today. It is also consistent with the Precision Medicine Initiative that supports medical innovation and improving medical care.”

Last year CMS also reversed a proposal to dramatically reduce price of test and maintained AlloMap at historical price of \$2821.

CareDx, based in Brisbane, California, developed AlloMap, invested in the generation of high quality clinical evidence, and has been offering the assay since 2005 with FDA IVD 510K clearance in 2008. The AlloMap testing service was incorporated into the International Society of Heart and Lung Transplantation guidelines in 2010. AlloMap is used in the vast majority of heart transplant centers nationwide, with more than 75,000 commercial tests performed to date.

**About CareDx**

CareDx, Inc., based in Brisbane, California, is a molecular diagnostics company focused on the discovery, development and commercialization of clinically differentiated, high-value, non-invasive diagnostic surveillance solutions for transplant recipients. The Company has commercialized AlloMap®, a gene expression test that aids clinicians in identifying heart transplant recipients. CareDx is also pursuing the development of additional products for post-transplant monitoring of other solid organs that use a variety of technologies, including next generation sequencing, to detect donor-derived cell-free DNA to monitor the health of organs after transplantation. For more information, please visit: [www.CareDx.com](http://www.CareDx.com).

CareDx, with its presence through Olerup, also develops, manufactures, markets and sells high quality products that increase the chance of successful transplants by facilitating a better match between a donor and a recipient of stem cells and organs.
